BLENDER SPREADER

Maintain constant homogenous blends of any and all combination of fertilizers, seeds, fungicides, herbicides, etc. Even perfectly blended materials tend to separate by size and density during transportation, or the spreading operation.

Belco Resources offers the Blender Spreader; a unique fountain blending system, which keeps a consistent blend of any and all products which can be spread with your typical spin spreader.

Combine various types of fertilizers, fungicides, herbicides, seeds, and sand or any combination of all three into the hopper and the fountain blender will mix all the products and keep them consistently blended as they are spread.

With a traditional spreader, you would need to make a pass with each individual product to ensure a consistent homogenous spread over your ground. The Belco Blender Spreader with its fountain blending system, allows you to traverse over the roughest terrain with the assurance that your products will not separate; and they will be distributed as a constant blend which will allow you to do your job more efficiently with more predictable results.

SBL-500

- Three Point Hitch Cat. 1
- Poly hopper
- Powder coated frame
- Simple adjustable Left-Right-Center spread pattern
- Galvanized spin disc with adjustable fins
- Fountain blending system

Left - Center - Right Discharge

Fountain Blending System
